

**Join the Call for a Washington Sewage Sludge Moratorium!**

Residents who live in an area near Davenport, Washington called Mill Canyon feel threatened by proposals to spread municipal sewage sludge on nearly 900 acres of nearby agricultural land uphill from where we live, garden and farm. The area in question includes our natural watershed. Not only are we asking that the permit application to apply sewage sludge in our “backyard” be denied, we are also demanding that Washington State Department of Ecology Director Maia Bellon and Washington State Governor Jay Inslee

***Immediately impose a state-wide emergency moratorium on approving all pending permits for land application of sewage sludge.***

**No more sewage sludge on agricultural land! Too many chemicals!**
